System 7: SideKick 2.0 Is Not Being Updated for System 7

=====

Article Created: 19 August 1991

Article Change History

09/02/92 - UPDATED

- To provide accurate contact information.

TOPIC -----

SideKick 2.0 crashes with a bus error when I try to open a name in the address book.

DISCUSSION -----

When running SideKick, turn off 32-bit addressing, and this feature will work.

Note that Borland International Technical Support said that SideKick 2.0 (which is not being updated) should not be used with any system software later than version 6.0.3. Otherwise, data could be lost or the machine may crash. The information can be exported to a text file and used with other programs.

For details, contact Borland Technical Support; search on Borland International for contact information.
