AppleShare: Internal Bridging Support

=======================================================================

Article Created: 14 May 1991
Article Last Reviewed: 27 May 1991
Article Last Updated:

TOPIC -----------------------------------------------------------

Does AppleShare support internal bridging in the server (I want to use
AppleTalk and EtherTalk), or must I only use EtherTalk and then use an
Ethergate to convert back to LocalTalk?

DISCUSSION ------------------------------------------------------

AppleShare itself does not inherently support internal bridging.  If you
wish to use a software bridge, the Apple Internet Router will bridge
between the two physical media and run in the background of an AppleShare
server.
