Macintosh IIsi: Needs RGB-NTSC Converter For NTSC Video

=====
Article Created: 14 May 1991
Article Last Reviewed: 17 July 1992
Article Last Updated:

TOPIC -----

Does the Macintosh IIsi video port support interlaced video devices, or do I need to add a Macintosh Display Card 4•8 with a video converter? I need an inexpensive solution for a simple VCR connection.

DISCUSSION -----

The Macintosh IIsi does NOT support interlaced video devices. You will need to attach an RGB-NTSC converter to the video port, or to an installed video interface.

For more information, search under "Macintosh IIsi" and "NTSC".
