•For technical accuracy

TOPIC -----

I need a list of all Macintosh OS managers not supported under A/UX 2.0.1.

DISCUSSION -----

According to A/UX Engineering, there are NO changes in the support of A/UX Toolbox from A/UX 2.0 to 2.0.1. Therefore, the ROM library support information in "A/UX 2.0 Toolbox: Macintosh ROM Interface" documentation is still accurate.

The following are ROM libraries NOT supported by A/UX 2.0 Toolbox:

- Apple Desktop Bus
- Deferred Task Manager
- SCSI Manager

The following are PARTIALLY supported by A/UX 2.0:

- AppleTalk Manager
- Event Manager, Operating System
- File Manager
- Gestalt facility
- Script Manager
- Segment Loader
- Serial Driver
- Slot Manager
- Sound Manager
- Utility, Operating System
- Vertical Retrace Manager

The following are supported, but the FUNCTIONALITY is not identical:

- Event Manager, Toolbox
- Floating-Point Arithmetic and Transcendental Functions Packages
- Shutdown Manager
- System Error Handler
- Time Manager

For more detailed information, refer to Chapter 5 of Inside A/UX Macintosh in A/UX Toolbox: Macintosh ROM Interface documentation.
