TOPIC -----

I am trying to use Apple File Exchange (AFE) and the Microsoft Works-to-Works Transporter to convert Appleworks 3.0 data to Macintosh Microsoft Works via AppleShare. AFE only recognizes the Appleworks data as ProDOS files on a ProDOS floppy disk. AFE treats these files as Macintosh data when it appears on the file server.

Is there a way to bring up the ProDOS-to-Mac menu under AFE?

DISCUSSION -----

Works-to-Works Transporter 2.0 will convert Appleworks 3.0 files to Microsoft Works files. You can get a copy of the utility from Microsoft by calling them and requesting Works-to-Works Transporter 2.0.

For more information, search on "Microsoft".
