LaserWriter IISC: Can't Have Two Computers Using Its SCSI Ports

===

Article Created: 14 June 1991
Article Last Reviewed:
Article Last Updated:

TOPIC ---

Can I connect two Macintosh computers to the two SCSI ports on a
LaserWriter IISC? Can I hook up any SCSI device to these ports (scanners,
hard drives)?

DISCUSSION --

Having two Macintosh computers connected via the SCSI port to one
LaserWriter isn't an Apple-supported configuration. If something gets
damaged as a result of a connection like this, it will void your warranty.

You can connect other peripheral SCSI devices, such as hard drives or
scanners, but not other computers.
