Macintosh: Troubleshooting "Non-Apple Disk Error"

=====

Article Created: 14 June 1991

TOPIC -----

My Macintosh keeps giving me a "Non-Apple Disk Error" when I insert a floppy disk, and asks me if I want to reformat the disk.

DISCUSSION -----

If it occurs only with one or two diskettes, there may be a problem with those disks and not the drive. If this problem only occurs when using disks of a certain brand or density, consider trying another brand of diskette. If a given diskette produces the same error in another computer, then almost certainly the problem is with that disk.

However, if this happens no matter what disk you insert - even master application disks - the problem most likely is with the disk drive itself.
