Article Last Updated:

TOPIC -----

I want to have interchangeable hard drives between a Macintosh IIfx and Macintosh IICI. Can the 160MB Drive for the Macintosh IICI be transferred at some point to a Macintosh IIfx and plugged in seamlessly?

DISCUSSION -----

You will be able to move your 160MB drive from the Macintosh IICI to the Macintosh IIfx with the addition of a different drive bracket which has just been made available. The drive bracket is Apple Part #805-0952.
