A/UX: Driver Needed for Ethernet Compatibility

==

Article Created: 13 August 1991

Article Change History

08/31/92 - REVIEWED
          o For technical accuracy.

TOPIC ---

Does the correct EtherTalk driver installed into the Macintosh System
folder make the Ethernet card compatible with A/UX? Does the A/UX kernel
need to be modified for compatibility?

DISCUSSION --

The Ethernet driver that you need to use with A/UX is called ae6. You add or
remove this driver from A/UX via the newconfig(1M) command. You can check the
man pages in A/UX for more information on this command.
