AppleCD SC: "110 VAC Only" Label is Incorrect

=====

Article Created: 13 August 1991

Article Last Updated:

TOPIC -----

My AppleCD SC is clearly marked "110 VAC Only", yet its specification sheet says it has a universal power supply. Which is it?

DISCUSSION -----

The drive's label is incorrect. The AppleCD SC does indeed have a universal power supply, even though label on the bottom of the unit says otherwise. The power supply is labeled "AC Input: 110-240v, 50/60Hz".
