TOPIC ---

I am installing DAL 1.2 and AppleTalk for VMS 3.0. The manual states that
AppleTalk for VMS 3.0 requires VMS 5.3 or higher. I can't upgrade to VMS
5.3 because I am running Informix, which doesn't support that version.

Is there a workaround for this?

DISCUSSION --

Yes. Install AppleTalk for VMS version 2.1 instead of version 3.0.
