TOPIC -------------------------------------------------------------

How can I set up a user (name and password) for temporary use?

DISCUSSION --------------------------------------------------------

1) In the Server Preferences dialog box, set the number of days until the
   password expires.

2) Change the user's privileges so that he or she can't change the password.

The only drawback is that it forces all server clients to change their
passwords.  The added security may be worth it.
