Macintosh 21" Color Display: Shadow Mask Picture Tube (10/91)

=====

Article Created: 7 October 1991

TOPIC -----

Does the Macintosh 21-inch Color Display use a Trinitron picture tube?

DISCUSSION -----

No, this display uses a shadow mask tube. Compared to the 19-inch Trinitron, the 21-inch color display has a larger screen area, exceptional overall and corner focus, brightness uniformity, and the absence of moire interference effects.
