Apple OneScanner: Image Editing Software

=====

Article Created: 9 October 1991

Article Last Updated:

TOPIC -----

Why doesn't the Apple OneScanner ship with image editing software, such as Photoshop or ColorStudio, as do most other scanners?

DISCUSSION -----

Image editing software isn't necessary for mainstream scanning. Other vendors require a multitude of image editing tools to adjust a scanned image to match the original, whereas Ofoto software automatically produces an accurate scanned image.

Image editing programs actually complement the OneScanner. Customers can benefit from those programs, but they aren't necessary for the basic purpose of getting an excellent scanned image.
