AppleTalk Remote Access 1.0: Coexisting w/ Other Products 11/94

=====

Article Created: 5 November 1991
Article Reviewed/Updated: 28 November 1994

TOPIC -----

Can I install and use these products on the same Macintosh with AppleTalk Remote Access (ARA) v1.0?

- AppleShare 2.0
- AppleShare Server 3.0
- AppleTalk Internet Router 2.0
- Apple SNA•ps Gateway

DISCUSSION -----

AppleShare 2.0

AppleShare 2.0 doesn't work with System 7. Because AppleTalk Remote Access only runs on System 7, this combination won't work.

AppleShare Server 3.0

AppleTalk Remote Access and AppleShare Server 3.0 work together on the same Macintosh. In this configuration, Remote Access users are administered via the AppleShare Server 3.0 Admin program.

AppleTalk Internet Router 2.0

AppleTalk Remote Access and the AppleTalk Internet Router 2.0 cannot run concurrently on the same Macintosh.

Apple SNA•ps Gateway

The SNA•ps Gateway product and AppleTalk Remote Access can reside and run on the same Macintosh.
