ADSP: Now Integrated with AppleTalk (3/94)

=====================================================================

Article Created: 2 January 1992
Article Reviewed/Updated: 28 March 1994

TOPIC -------------------------------------------------------------

I've looked at AppleShare 3.0, and don't find any ADSP file with it.
I need the latest version of AppleTalk.

DISCUSSION --------------------------------------------------------

Ever since AppleTalk v. 56 (part of System 7), the ADSP stack is integrated
with the rest of the AppleTalk stack.  To get the latest available version
of AppleTalk, install the latest version of the Network Software Installer
(NSI). Search on Network Software Installer to find the latest information.

Article Change History:
28 Mar 1994 - Removed reference to ARA as update mechanism to AT version.
              Referred to NSI instead.
