Direct-To-1: Translation Between All-in-1 and MacWrite

===

Article Created: 16 December 1991

Article Last Updated:

TOPIC ---

We're running a VAX-based server with PCs and terminals, and plan to add
Macintosh clients. We communicate worldwide over a VAX network using
All-in-1 mail and word processors. We're considering PATHWORKS for
Macintosh to turn the VAX into a server for the Macintosh.

One of our major requirements is to download All-in-1 documents to use in a
Macintosh word processor such as MacWrite. After some tailoring with
MacWrite, we need to load the document back to the VAX as an All-in-1
document.

I understand MacLink Plus/Translators from Dataviz contain a translator
called WPS-Plus VMS. Will this translator work between an All-in-1 and
MacWrite document?

DISCUSSION ---

Digital confirmed that WPS-Plus format is different and the translator
won't work with All-in-1.

We found the following product information:

  Direct-To-1 allows users to send Macintosh files to other All-In-1 users
  with a Macintosh 512KE or later; Reflection V3.4 or later; Digital VAX
  All-In-1.

  Direct-To-1 is a utility for the Digital VAX that allows Reflection users
  to send Macintosh files to other All-In-1 users. When used with Walker
  Richer & Quinn's Reflection 2 for the Macintosh, users can send a variety
  of file formats over any supported asynchronous or network connection to

a VAX host. Direct-To-1 offers convenience and security features that
make All-In-1 a effective communications tool for business users.
