ImageWriter II: Condensed Print Problem is Driver Related

=====

Article Created: 6 December 1991

TOPIC -----

I have an ImageWriter II connected to my Macintosh. It's printing condensed mode for no apparent reason.

DISCUSSION -----

The condensed printing problem is printer driver related. The Macintosh prints everything in graphics when Best or Faster mode is selected. Check the Page Setup in the File menu first. If it still prints in the condensed mode, replace the printer driver.
