Macintosh 512K: Upgrade to Macintosh 512Ke Was a ROM Swap

=====

TOPIC -----

Are there any differences between an Apple-sold Macintosh 512Ke and
Macintosh 512K upgraded to a Macintosh 512Ke?

DISCUSSION -----

There should be no differences between the two, whether the Macintosh 512Ke came from Apple in that configuration or if it was done as an upgrade. The Apple upgrade was a ROM swap from 64K ROMs to 128K ROMs from the Macintosh Plus, and the most significant change was support for the Apple 800K floppy drive.

The only possible difference is that the upgrade didn't include the 800K floppy drive, although this is unlikely because that was the main reason for the upgrade. Every Macintosh 512Ke shipped from Apple had an 800K floppy drive installed.
