LaserWriter IIIf/IIg: Add RAM to Correct Margin Problems (2/95)

=====

Article Created: 26 March 1992
Article Reviewed/Updated: 06 February 1995

TOPIC -----

I have margin problems when printing to the LaserWriter IIIf and IIg.

DISCUSSION -----

The LaserWriter IIIf now ships with 4MB and the LaserWriter IIg ships with 8MB of DRAM. These configurations will improve the margin problems and some memory management problems.

If your printer has similar problems, the memory can be upgraded to these levels to resolve the problem. See your authorized Apple service provider for the upgrade.
