Apple IIc: How to Determine If It Needs ROM Upgrade for UniDisk

===

Article Created: 14 April 1992

TOPIC ---

I have an Apple IIc, and I want to purchase a UniDisk 3.5 to use with it.
My dealer said that some of the earlier Apple IIc computers need a ROM
upgrade to support the UniDisk 3.5.

How can I determine if my Apple IIc needs the upgrade without bringing it
to the dealer?

DISCUSSION --

Check your Apple IIc serial number. The Apple IIc systems that require the
ROM upgrade for UniDisk 3.5 support are those with serial numbers lower
than F6051GFA2S4000.

Another way to determine if your Apple IIc needs the ROM upgrade is to go
into BASIC and type "PR#7" and press Return. If the Apple IIc responds
with "AppleTalk Offline", you have the new ROM. If it tries to start up an
external drive or returns "Check Disk Drive", you have the old ROM.

Your Apple service provider will perform the ROM upgrade free of charge.
