Macintosh Portable Data Modem 2400: Description (Discontinued)

=====

Article Created: 8 June 1992

TOPIC -----

This article describes the Macintosh Portable Data Modem 2400.

DISCUSSION -----

The Apple Macintosh Portable Data Modem 2400 allows the Macintosh Portable computer to communicate with other personal computers, minicomputers, and mainframes to access and exchange information.

A standard asynchronous 2400-bps modem, the Macintosh Portable Data Modem 2400 can communicate with any standard data modem operating at 2400, 1200, or 300 bps.

Its low-power design preserves the battery power of the Macintosh Portable computer. And it can operate unattended; the modem is designed to receive files when the user is away from the computer.

Features

- Industry-standard modulation techniques: Bell 103, Bell 212A, CCITT V.22, CCITT V.22bis
- Automatic "wake up" feature
- Low-power design
- Auto dial and auto/manual answer
- Supports a subset of the AT command set

Benefits

- Lets you communicate with any computer that uses a standard data modem.
- Lets you receive files when away from the Macintosh Portable computer.
- Preserves the battery power of the Macintosh Portable computer.
- Saves time and effort by permitting unattended operation.
- Lets you control your modem through the use of direct modem commands.
