System 7.1: Who Should Upgrade?

=====

Article Created: 19 October 1992

TOPIC -----

Does Apple recommend that every Macintosh user upgrade to System 7.1?

DISCUSSION -----

Apple recommends upgrading to System 7.1 if you are currently running System 6.0.X, or if you are running System 7.0 or 7.0.1 and want WorldScript functionality.

System 6.0.X users get:

- The benefits of System 7 (built-in TrueType, file sharing, Publish and Subscribe, improved Finder, multitasking, Balloon Help, and so on).
- The ability to use At Ease and future system extensions based on System 7.1.
- Improved support for two-byte languages (alphabets) and fonts, like Japanese, Chinese, and Korean.

Current System 7 users get:

- Improved font handling with the new Font folder.
- Improved stability with the integration of System 7 Tune-Up 1.1.1 and other fixes.
- Improved mechanism to support future Macintosh models with System Enablers.
