AppleShare 3.0: Print Server Launch Requires LaserWriter Driver

===

Article Created: 4 December 1992

TOPIC ---

We want to use AppleShare print server software for an AppleTalk
ImageWriter II printer only. We can't launch the print server software.
We get a message saying, "The print server had trouble getting to the
LaserWriter file. Please make sure the print drivers are installed
correctly."

DISCUSSION --

AppleShare 3.0 print server software requires the LaserWriter driver
before it can launch. It won't function properly with just the AppleTalk
ImageWriter driver.
