DAL: AS/400 and SQL/400 Runtime Libraries

==

Article Created: 6 January 1993

TOPIC ---

Do I only need the SQL/400 run-time libraries to use the DAL Server on an
AS/400? Do I have any limitation on using DAL -- in this case, comparing to
use it with SQL/400 product (for example I couldn't delete or update the data
in the base)?

DISCUSSION --

You need the SQL/400 runtime libraries only if you wish to use
the Data Access Language for the AS/400 Server in a read-only manner.

But to be able to update and delete, you need the full SQL/400 product, and
the journal facility must be turned on for the table(s) in the database which
you wish to update.
