AppleShare Print Server: Can't Use Bin Info to Print (9/95)

===

Article Created: 15 February 1993
Article Reviewed/Updated: 20 September 1995

TOPIC ---

I print from a Macintosh computer with LaserWriter driver version 7.2, to a
LaserWriter Pro 600. This all works fine, including selecting the bins for
output. When I use the AppleShare Print Server with the latest drivers installed
on the server, it cannot pass the bin information along.

DISCUSSION --

The solution is on the client side. You should bring up the Chooser and select
the print spooler. You must then do a manual set up by holding down the Option
key and clicking Setup in the Chooser dialog box. This will display a list of
printers and options associated with those printers.

Once the setup is complete, you will have the ability to select different bins.
