System 7.1: Custom Install Bug with Monitor CDEV (6/93)

=====

Article Created: 29 March 1993

Article Change History

06/11/93 - REVISED & RETITLED

- The problem isn't strictly on the Quadra.

TOPIC -----

You must use Easy Install when installing System 7.1 on these systems:

- Quadra 700, 900, and 950
- Macintosh LC and LC II
- PowerBooks 100, 140, and 170

DISCUSSION -----

There is a known problem in the Custom Install that doesn't install all of the appropriate resources for the Monitors CDEV. The problem manifests itself when you try to use the OPTIONS portion of the CDEV. You will get an "Out of Memory" message, which will prevent you from accessing the options. By the way, replacing the Monitors CDEV doesn't resolve the issue!
