A/UX 3.0 and Telnet Receiving Two Mail Notices (4/93)

===

Article Created: 12 April 1993

TOPIC ---

I have been receiving two mail notices whenever I connect to A/UX 3.0 with
telnet.

DISCUSSION ---

We looked at the A/UX 3.0 source code and this is what we found:

• The first "You have mail" message, is generated by the process remlogin,
  which is called by the in.telnetd process when a telnet login is
  performed.

• The second "You have mail" message is displayed by the initialization
  scripts during the login sequence. Both /etc/profile and /etc/cshrc check
  for mail.
