Apple Workgroup Server 95: MacTCP Out the Serial Port (6/93)

===

Article Created: 16 June 1993

TOPIC --

How do I change MacTCP to work out of the LocalTalk port, either as well as
or in place of the built-in Ethernet port of the Apple Workgroup Server
(AWS) 95?

DISCUSSION --

The MacTCP implementation that runs under A/UX does not support the
LocalTalk interface. The CDEV is really just a window into the unix based
TCP driver and does not offer the same functionality as the Macintosh OS
version.
