CD ROMs: Cleaning Your Discs (7/93)

Article Created: 20 July 1993

TOPIC -----

If there are fingerprints on the CD for my CD-ROM drive, will this impact the performance and if so, how can I clean them?

DISCUSSION -----

Cleaning Computer CD ROM disks is no different from cleaning Audio CDs. You should only use a soft lint-free cloth and wipe from the center of the CD straight out (not in a circular motion around the disk). Fingerprints can interfere with the drive's ability to read the disk.
