Centris 660AV & Quadra 840AV: Speech Recog & GeoPort Use (8/93)

=====

Article created: 10 August 1993

TOPIC -----

Can I use speech recognition while I'm using the GeoPort Telecom Adapter on the Macintosh Centris 660AV and Quadra 840AV??

DISCUSSION -----

When speech recognition is turned on, your Centris 660AV or Quadra 840AV may not be able to establish a modem connection using the GeoPort Telecom Adapter.

This may occur when the DSP (Digital Signal Processor) is attempting to perform the demanding work of both speech recognition and establishing a modem connection.

If this problem occurs, turn off speech recognition in the Speech control panel and attempt the modem connection again.
