MacCheck: Multiple System Folders Detected (8/93)

===

Article Created: 19 August 1993

TOPIC ---

I ran MacCheck on my Macintosh and it detected several System Folders.
What should I do?

DISCUSSION ---

MacCheck detects multiple System Folders and displays their pathname in the
"Additional System Info" log.

Although you can safely store multiple System Folders on your drive, many
problems can be traced to additional System Folders inadvertently placed on
drives. Ignore the warning if you intend to have multiple System Folders;
otherwise, Apple recommends only one System Folder per hard disk.
