

At Ease 2.0 for Workgroups: Installation (8/95)

Revised: 8/14/95 Security: Everyone At Ease 2.0 for Workgroups: Installation (8/95) _____ Article Created: 20 September 1993 Article Reviewed/Updated: 14 August 1995 TOPIC ------This article describes how to install At Ease 2.0 for Workgroups, including: • Using the Install program • Creating an administrator password • Setting up for remote administration on an AppleTalk network DISCUSSION ------You will need to install At Ease 2.0 for Workgroups on the startup disk of every computer on the network that will be using it. (NOTE: The software licensing agreement for your copy of At Ease specifies how many computers may use that copy. Also, before you put other software in shared folders in At Ease, be sure to check whether the software agreement for those programs allows for sharing.) Before you begin: • Make sure that file sharing is off on the computers you will be installing At Ease on. To check, look in the File Sharing Setup control panel (in the Control

• Make sure all virus checkers on the computers are turned off.

Panels folder under the Apple menu).

• Make sure you have these disks: At Ease 2.0 (WG) Install 1 At Ease 2.0 (WG) Install 2 At Ease 2.0 (WG) Install 3 $\,$

WARNING: DO NOT install At Ease 2.0 for Workgroups by dragging the files to each hard drive from the floppies. Use the Installer program, which will put files in the correct locations on the startup disks.

```
Using the Installer
_____
To install At Ease 2.0 for Workgroups on the first Macintosh (the
administrator's):
Step 1
____
Turn on the Macintosh.
Step 2
____
Insert the At Ease 2.0 (WG) Install 1 disk.
Step 3
____
Double-click the installer icon.
Step 4
____
Click OK.
Step 5
____
Click the Install button and follow the directions on the screen.
Step 6
____
Click Restart to make At Ease active on that Macintosh.
Administrator Password
_____
Now you will need to create an administrator password so that only you, the
administrator, can make changes to the At Ease computers. To do this:
Step 1
____
Open the At Ease Setup program. You will find it on the startup disk of any
Macintosh that has had At Ease installed.
Step 2
____
Choose Administrator Password from the Options menu.
Step 3
____
Type the password in the first box, then type it again to confirm it. (You will
just see dots instead of letters -- this is to keep the password confidential.)
Then, if you choose, type a clue in the large box below.
Step 4
____
Click OK.
```

Once you have set up the first Macintosh with At Ease, you will need to prepare the other computers in the workgroup. If the Macintosh systems are not linked by an AppleTalk network, you will have to run the Installer and create the administrator's password on each Macintosh individually at this point.

Setting Up For Remote Administration

If the At Ease computers are linked by an AppleTalk network, the workgroup's administrator can administer the network remotely from a single Macintosh. The administrator can set up At Ease and make changes to it on the administrator's Macintosh, then update every other computer on the network.

To prepare for remote administration, follow these steps for each At Ease computer:

Step 1 ____ Choose Control Panels from the Apple menu. Step 2 ____ Open the Sharing Setup control panel. Step 3 ____ Type a name into the space labeled "Macintosh Name," then close the control panel. Make sure each At Ease Macintosh has a distinct name and that everyone knows which name goes with which computer. Step 4 ____ Go back to the At Ease Setup program by clicking inside the At Ease Setup window. Step 5 _ _ _ _ _ _ Choose Security from the Options menu. Step 6 ____ Click the checkbox labeled "Allow remote administration," then click OK. Step 7 ____ Choose Quit from the File menu to quit the At Ease Setup program. Article Change History: 14 Aug 1995 - Corrected minor typo. 08 Aug 1995 - Added keyword and reviewed for technical accuracy.
