MacSNMP: Mac System MIB Compile Error (4/96)

Article Created: 21 September 1993
Article Reviewed/Updated: 26 April 1996

TOPIC -----

Next week, together with IBM, I'm going to be demonstrating SNMP at a big exhibition. In trying to configure a RS/6000 as the console we had the following problem:

We couldn't compile the Apple-Macintosh-System-MIB. An error was reported at the line "userInTrouble TRAP-TYPE". I noticed that the MIB's first line states "IMPORTS TRAP-TYPE FROM RFC-1215". This RFC is not available on the RS/6000.

- Is this the problem?
- What is RFC-1215, where is it available, and can we receive a copy?

DISCUSSION -----

You have to remove this trap from the MIB definition and it should work fine. The RS/6000 can't handle this trap.

RFC 1215 is a convention for Defining Traps for use with the SNMP, you can find the it on the Internet using a tool such as Gopher.
