System Enablers: Are Performa & Mac Enablers Compatible? (10/93)

===

Article Created: 6 October 1993

TOPIC ---

Are the system enablers for similar Macintosh and Performa computers (such as
the Macintosh LC III and the Performa 450) compatible?

DISCUSSION --

No, they are not compatible. You should not use Performa enablers with the
Macintosh operating system or Macintosh enablers with the Performa operating
system, since a particular system enabler may not have system resources that
the other operating system needs.

Also, do not put a Performa enabler and a Macintosh enabler for a similar
machine in the same System Folder, since this may cause unpredictable results.
