System 7 Pro 7.1.1: Macintosh AV Systems Alert (3/94)

==

Article Created: 7 October 1993
Article Reviewed/Updated: 24 March 1994

TOPIC ---

An incompatibility has been discovered when running PowerTalk 1.0 on a
Macintosh Centris 660AV or Macintosh Quadra 840AV system. The
incompatibility can result in performance degradation and/or possible
B*Tree corruption.

DISCUSSION --

One problem occurs when users exchange a Business Card (or Personal
Catalog) between a non AV Macintosh and an AV system. The Business
Card (Personal Catalog) will be damaged when opened on the AV system.
PowerTalk has a built-in repair function, but a user confirmation
dialog will be brought up every time such repair takes place.

Before installing System 7 Pro on Quadra 840AV or Centris/Quadra 660AV, make
sure you have System Enabler 088 1.0.1 or later installed.

Version 1.0.1 (or later) of System Enabler 088 is currently available in Apple
SW Updates, on AppleLink.
