Modem Software for AV Computers: Supports 14.4kbps. (11/93)

===

Article Created: 17 November 1993

TOPIC ---

When will the modem software for the AV machines be upgraded to 14.4
Kbps (Kilobits per second)?

DISCUSSION---

At the time the manuals were written, Apple could only guarantee 9600,
and that was put in the manuals. After that point, we were
able to implement 14.4, so Apple does support 14.4 Kbps (Kilobits per
second.)
