Display Card 24AC: Description (6/95)

Article Created: 16 November 1993
Article Reviewed/Updated: 28 June 1995

TOPIC -----

This article describes the Display Card 24AC.

DISCUSSION -----

The Macintosh Display Card 24AC is a 24-bit NuBus color/grayscale display card with QuickDraw acceleration.

Features

- Supports all of Apple's Macintosh-compatible color displays at 24-bit resolution (16.7 million colors) and grayscale monitors at 8-bit resolution (256 grayscales).
- QuickDraw Acceleration
- Compatible with all Quadra, Centris and Macintosh II family CPUs, PowerPC CPUs with an available NuBus slot, and the Apple Duo Dock.
- Meets 7 inch NuBus card standard
- Supports multiple scan VGA monitors (may require third-party adapter to connect)

Article Change History:
28 Jun 1995 - Changed multiscan to multiple scan. Reviewed for accuracy.
