SNA•ps: Automating IND\$FILE File Transfers (11/93)

=====

Article Created: 22 November 1993

TOPIC -----

I'm looking for an automatically solution for doing file transfer with IND\$FILE. SNA•ps 3270 can do file transfer with IND\$FILE, but it can't do them automatically.

I want that the Macintosh to send or get a text file to or from the host at a certain hour automatically. For example, at 5:00 PM every day check the host with an IND\$FILE file transfer Tool.

DISCUSSION -----

You'll need a third party product such as QuicKeys to automate file transfers. Information on QuicKeys by CE Software, Inc. follows for your convenience.

QuicKeys 3.0

Business And Professional Software  
Macro Generators  
QuicKeys 3.0  
Keyboard enhancer  
Macintosh Plus or larger; hard disk drive.

QuicKeys allows assignment of commands or actions to keystrokes. The program can define key presses to run documents and programs, select menu items, run Fkeys, insert current date and/or time, execute more than a dozen mouse movements, insert text strings, perform click and drag sequences and perform combinations of these commands or actions – all with a key press. DialogKeys, a companion program, lets a user use key presses to "click-in" buttons, check boxes or radio buttons in dialog boxes. QuickAccess is the utility program specifically designed for QuicKeys to create, modify and combine sets of defined keystrokes. It will also install sets into QuicKeys and print keyboard templates for easy reference. \$169
