AppleScript: Displaying Custom Icons (11/93)

=====

Article Created: 29 November 1993

TOPIC -----

How can I display custom icons? I can display the yield sign, stopping hand, and talking man, but other icons won't display.

DISCUSSION -----

The icon you want to display has to be in one of three places:

- In the resource fork of the script file
- In the system file, or
- In the current application.
