HyperCard: Exporting Text with Page Breaks to MacWrite II (8/92)

=====================================================================

Article Created: 31 July 1992
Article Reviewed/Updated: 26 August 1992

TOPIC -----------------------------------------------------------

Here's how to export a field from HyperCard to a text file that will
be read into MacWrite II with page breaks between lines.

DISCUSSION ------------------------------------------------------

```
on mouseUp
  ask "export data to what file"
  if it is not empty then
    put it into filename
    open file fileName
    repeat with i = 1 to the number of lines of field 1
      write line i of field 1 & numtochar(12) to file filename
    end repeat
    close file fileName
  end if
end mouseUp
```

The key line is "write .... numToChar(12)...", because that's what does the
page break.  Ascii 12 is a page break.
