HyperCard 2.0: Conflict with Icon Wrap INIT (7/92)

==

Article Created: 29 November 1990
Article Reviewed/Updated: 23 July 1992

TOPIC ---

HyperCard 2.0 crashes when the down-arrow key is pressed.

DISCUSSION --

This could be due to a conflict between HyperCard and an INIT called Icon
Wrap. If so, remove the INIT, then restart the computer.

Icon Wrap patches a ROM routine called CopyBits, and stays around after
loading. A newer version of Icon Wrap solves the problem.
