HyperCard: Printing Problem to Kodak Diconix (8/93)

=====

Article Created: 6 July 1993
Article Reviewed/Updated: 2 August 1993

TOPIC -----

My stack has a simple "Print Report" command in a custom menu. This menu item will not print to a Kodak Diconix 180si ink-jet printer from HyperCard 2.1, even though it prints fine to standard Apple printers.

DISCUSSION -----

The stack will print to the Diconix if "Print Report" is chosen from the File menu. This represents a probable incompatibility between the Diconix driver and HyperCard. Kodak is aware of this problem. HyperCard is not certified with the Diconix printer.
