HyperCard 2.1: DOS Mounter Compatibility (7/92)

======================================================================

Article Created: 30 July 1991
Article Reviewed/Updated: 23 July 1992

TOPIC -------------------------------------------------------------

A customer was unable to open HyperCard 2.1 while DOS Mounter was present.

DISCUSSION --------------------------------------------------------

This is not to say that DOS Mounter is incompatible with HyperCard.  It may
be that a combination of DOS Mounter with one or more other INITs or CDEVs
in incompatible with HyperCard 2.1.  In one case, removing DOS Mounter 2.01
from the System Folder enabled the customer to open HyperCard 2.1.
