HyperCard 2.2: Stand-alone Apps Need 2MB for Color (2/94)

===

Article Created: 23 February 1994

TOPIC ---

After compiling a HyperCard 2.2 stack into a stand-alone application,
graphics are not displayed in color.

DISCUSSION --

The default memory allocation of the stand-alone application is not set
high enough for the program to display graphics in color. To display color
graphics, adjust the memory allocation of the stand-alone application to a
minimum of 2048K.
