AV Systems: How To Adjust Auto Video Gain (12/94)

==

Article Created: 30 March 1994
Article Reviewed/Updated: 2 December 1994

TOPIC ---

We would like to utilize the AV technology in the Quadra or Power Macintosh
computers, but we understand it has an auto-gain feature that cannot be turned
off via software, or at least in the Quadra 840AV.

There are some indications that the auto-gain feature in the Power Macintosh may
be turned off under software control and the gain adjusted manually. How can
this be done?

DISCUSSION --

The Fusion Recorder utility program that comes bundled with the Macintosh Quadra
840AV and the Power Macintosh AV models doesn't support video gain (black level
or white level), or contrast control. If you purchase VideoFusion software from
VideoFusion, Inc., you will have the ability of adjusting the contrast control
on only the Power Macintosh AV models.

There are third-party companys that provide hardware like the Radius' Video
Vision or SuperMac's Video Spigot for greater video control on the Quadra
840AV.

To locate a vendor's address and phone number, use the vendor's name as a
search string in the Tech Info Library.

Article Change History:
15 Nov 1994 - Corrected contrast control with VideoFusion software.
