Workgroup Server 9150: Internal Cache Brief Description (4/94)

=====================================================================

Article Created: 26 April 1994

TOPIC -----------------------------------------------------

This article briefly describes internal cache on the Workgroup Server 9150 (WS
9150).

DISCUSSION ------------------------------------------------

The PowerPC 601 processor maintains a 32 kilobyte, unified, set associative
internal cache, organized as 64 sets of 8 lines were each line is divided into 2
sectors of 32 bytes each.  The cache supports inhibit, copy back or write-though
on a page basis, and both refills and writes back are 4 double word burst
transactions.
