Bracketed Entries In AppleShare Print Server Queue (5/94)

======================================================================

Article Created: 16 May 1994

TOPIC -----------------------------------------------------------

LaserWriter driver 8.x.x print server jobs show as bracketed entries in the
queue while LaserWriter driver 7.x jobs do not, why?

DISCUSSION ------------------------------------------------------

We installed and compared AppleShare Print Server 3.0, 3.0.3b, as well as a
4.0.1 and noted they all log print jobs the same: LaserWriter driver 8.x.x print
jobs are bracketed whereas 7.x are not.  This is normal, and we believe is due
to the drivers being PostScript Level II or Level I respectively, and the
spoolers handle the print job queries from the 7.x and 8.x.x drivers
differently.
