HyperCard: Printing with Fax Sender (5/94)

==

Article Created: 23 May 1994

TOPIC ---

I am using HyperCard and attempting to fax cards using Fax Sender. I select
'Fax Sender' in the Chooser as the output device and select 'Print Card' or "Fax
Field" from the File menu. I then receive the message 'No fax recipient has
been selected- Printing has been canceled.'

Selecting 'FAX Report' or "FAX Stack' from the File menu displays the Fax Sender
dialog box and faxes are transmitted successfully once a phone number is
entered. How do I correct this problem?

DISCUSSION --

This is a symptom of a larger problem with HyperCard. When selecting 'Print
Card' from the File menu, the normal dialog is not displayed. As a result, you
will not be able to take advantage of any of the options in that dialog. This
is the way the print card function in HyperCard has operated since its
introduction.

The only work around available is to use the 'Print Stack' or 'Print Report'
commands.
