ARA: The Correct Global Village TelePort/Bronze Script (6/94)

===

Article Created: 20 June 1994

TOPIC ---

We can't connect using Apple Remote Access (ARA) with the TelePort/Bronze for
Performa, TelePort ADB script. Is this the correct script?

DISCUSSION --

You are using the WRONG script. You should use one of the following scripts:

• "Global Village Bronze" which comes with ARA 2.0.

• "Global Village TelePort" which comes with ARA 1.0.

These modem scripts are included with the respective ARA software and can be
installed during installation. Do NOT use the "... ADB" script! The Performa
modem draws power from the Apple Desktop Bus (ADB), but is not an ADB modem like
the original TelePort ADB modem.
